PROFESSIONAL SUMMARY

Computer Engineer with experience in network infrastructure design, IT project management, and technical support. Possess strong fundamentals in full-stack software development, acquired both academically and practically. Highly oriented toward efficient problem-solving, optimizing operational continuity, and leading the end-to-end deployment of comprehensive technology solutions.

PROFESSIONAL EXPERIENCE

Sistelco S.R.L.

IT Project & Network Infrastructure Engineer

Tucumán, Argentina

April 2026 – Present

- **Managed** end-to-end IT infrastructure projects, coordinating the physical deployment of fiber optics, structured cabling, and IP equipment from on-site assessment to final delivery.
- **Designed and implemented** network architectures and drafted technical-commercial proposals for corporate and government clients, ensuring scalable solutions tailored to specific requirements.
- **Operationally directed** on-site technical crews, efficiently managing deployment timelines and material resources to meet established delivery deadlines.
- **Diagnosed and resolved** critical technical connectivity incidents in real-time during project execution, minimizing the impact on deployment schedules.

IPSST (Instituto de Previsión y Seguridad Social de Tucumán)

IT Help Desk Technician

Tucumán, Argentina

July 2025 – June 2026

- **Administered** first-level technical support within a highly critical institutional environment, resolving over 1,600 incidents and centralizing operational traceability using the GLPI ticketing system.
- **Diagnosed, resolved, and escalated** hardware, software, and network connectivity incidents, ensuring high availability and operational continuity for institutional services.
- **Trained** external and internal users on the use of institutional platforms, optimizing technology adoption and resolving technical issues.

EDUCATION

Universidad Nacional de Tucumán

Computer Engineering

Tucumán, Argentina

March 2020 – August 2026

- **Degree Thesis:** Executed the End-to-End (E2E) development of a web-based management system for a commercial business, covering its full lifecycle. Implemented a scalable full-stack architecture deployed in the cloud, utilizing Artificial Intelligence-assisted development workflows (AI Pair-Programming) to enhance code construction and optimization.

Universidad Nacional de Tucumán

University Extension Course: Full-Stack Web Development

Tucumán, Argentina

October 2022 – February 2023

- **Developed** a fully functional website by integrating frontend and backend architectures with its respective database, managing the project's lifecycle under full-stack development standards.

TECHNICAL SKILLS & COMPETENCIES

- **Infrastructure & Networking:** Network Architecture, Fiber Optics, Structured Cabling, IP Equipment, IT Technical Support, GLPI.
- **Web Development:** Node.js, Express.js, React.js, Vue.js, Next.js, TypeScript.
- **Languages:** Java, C, C++, Python, JavaScript, HTML, CSS, SQL.
- **Databases:** PostgreSQL, MySQL, Firebase.
- **Tools & AI Assistants:** Git, GitHub, Vercel, Render, Supabase, Antigravity IDE, Claude, Gemini.
- **Languages:** Spanish (Native), English (B2 Level).
